EDUCATION

Rutgers University <i>M.S. in Mathematics, GPA 4.0</i> – Relevant coursework: <i>Graph Theory (A), Algorithmic Trading and Portfolio Management (IP)</i> <i>Financial Statistics and Risk Management (IP), Experimental Mathematics (A)</i>	New Brunswick, NJ Expected May 2027
Rutgers University <i>B.A. in Mathematics, GPA 3.96 — Summa Cum Laude</i> – Relevant coursework: <i>Introduction to Stochastic Processes (A), Mathematical Theory of Statistics (A)</i> <i>Mathematical Theory of Probability (A), Linear Optimization (A)</i>	New Brunswick, NJ May 2023
University of Maryland <i>B.S. in Economics Minor in Statistics</i> – Relevant coursework: <i>Econometrics (A+), Advanced Topics in Econometrics (A)</i> <i>Game Theory (A), Mathematical Methods for Physics (A–)</i>	College Park, MD May 2022

RESEARCH PROJECTS

Liquidity-Dependent Retrace of Price Spikes under Cross-Venue Arbitrage <i>Independent research, Rutgers (Prof. Larsen)</i> – Proposed a model of how far a CEX price spike retraces once arbitrage with a constant-product AMM pool closes the gap, as a function of pool liquidity, slippage, and book depth; to be estimated on ETH data, evaluated out of sample.	Fall 2026
Permutation & SYT Statistics via the Robinson–Schensted Algorithm <i>Project Lead, with Jike Liu — Experimental Mathematics, Rutgers (Prof. Doron Zeilberger)</i> – Computational study of the RS bijection in Maple: verified the Logan–Shepp limit shape and $\lambda_1/\sqrt{n} \rightarrow 2$ convergence; quantified covariance and correlation of longest increasing/decreasing subsequence lengths; tested an asymptotic independence conjecture for fixed-entry locations in the insertion and recording tableaux. Identified novel integer sequences. Paper, slides, code, and data: austindecicco.com/gradp.html .	Spring 2026

EXPERIENCE

Independent Investor <i>U.S. Equity Markets; Residential Property</i> – Special-situations and thematic equity. Largest successes were a post-restructuring position in American Coastal Insurance (ACIC, formerly UIHC) and thematic AI and semiconductor exposure during the 2023–2024 rally. – Directed the renovation of a residential property: managed contractors, capital improvements, and project accounting.	Self-Directed May 2023 – Present
Cryptocurrency Arbitrage <i>Ethereum and VeChain DeFi Ecosystems</i> – Manually executed cross-DEX arbitrage on Ethereum (Uniswap) and VeChain (Vexchange, Betterswap, others) during the 2020–2022 DeFi cycle; entry threshold scaled with capital and gas to clear fixed and proportional fees plus a buffer for expected spread decay over the ~5-minute manual execution window. – Hundreds of trades, low three-figures average profits per trade on capital-limited college accounts; manual execution was the binding latency constraint.	Self-Directed 2020 – 2022
Executive, College Park Student Investment Group <i>University of Maryland</i> – Prepared market commentary, organized and led group meetings on current conditions, and educated peers.	College Park, MD 2020 – 2021
Volunteer Firefighter <i>Flemington Fire Department</i>	Flemington, NJ May 2024 – Present

COMPETITIONS

Vanguard ETF Challenge	Ongoing
Bloomberg Global Trading Challenge	Registered

SKILLS

Programming Experience: Python, Maple, Java, SAS, Stata, MATLAB, $\text{\LaTeX}$, HTML, CSS.

Quantitative: Stochastic processes, mathematical statistics, time-series and panel-data econometrics, regression and hypothesis testing, combinatorics, Monte Carlo and bootstrap methods.

Markets: 10+ years personal trading (equities, options, crypto); fundamental and special-situations equity analysis.
